

ORATILWE BOTLHALE RADIKELEDI

Software Developer | AI & ML | Full-Stack | Web Designer | IT Graduate
062 894 4012 • botlhaleradikeledi@gmail.com • Johannesburg, SA
[Portfolio](#) • [GitHub](#) • [LinkedIn](#)

PROFESSIONAL PROFILE

Versatile and driven IT graduate (76% average, 13 distinctions) with active professional experience as a Junior Web Designer at Point B Agency and as Founder of Lumora Technologies a web and software development company with 20+ live production systems under management. Proficient across the full stack: Python, Java, JavaScript, PHP, SQL, and HTML5/CSS3, with hands-on experience in AI/ML development, solution architecture, database administration, API integration, system security, UX design, and automation. Independently built a machine learning model to 97% accuracy. Uses AI tools including ChatGPT and Claude daily as genuine development tools. Cisco CCNAv7 and IT Essentials certified. IBM UX Design certified. Currently completing an Advanced Diploma in IT with modules in Artificial Intelligence, Advanced Databases, UX Design, and Emerging Technologies graduating 2027.

TECHNICAL SKILLS

AI & Machine Learning	Python (Pandas, NumPy, Scikit-learn), ML pipelines, model training & validation, Jupyter Notebook, AI-assisted dev
AI Tools	ChatGPT, Claude, GitHub Copilot daily use for coding, debugging, automation, problem-solving, prototyping
Languages	Python, Java, JavaScript, PHP, HTML5, CSS3 OOP, functional programming, scripting, full-stack development
Solution Architecture	Multi-tier architecture, design patterns, algorithmic design, system integration, fit-for-purpose solution design
Databases & SQL	MySQL, SQL querying, schema design, normalisation, integrity constraints, query optimisation, data validation
APIs & Integration	REST APIs, JSON, system integration, platform connectivity, webhook handling, third-party API implementation
Web & CMS	WordPress (custom code), WooCommerce, responsive design, UI/UX, Figma (working knowledge), print & digital design
Security	Access control, authentication, data integrity, audit logging, input validation, security hardening, SSL/HTTPS
Testing & QA	Functional testing, regression testing, UAT, cross-browser testing, structured QA checklists, bug documentation
DevOps & Cloud	Git/GitHub, AWS (workshop trained), cloud hosting admin, deployment pipelines, DNS/domain configuration
Networking	Cisco CCNAv7 certified — TCP/IP, LAN/WAN, routing, switching, wireless, VoIP fundamentals, network security
Automation	Python & JavaScript scripting, workflow automation, process improvement, AI-assisted automation

PROFESSIONAL EXPERIENCE

Junior Web Designer | [Point B Agency](#) | May 2026 – Present

- Design and build WordPress websites for clients using custom HTML, CSS, PHP, and JavaScript — coding directly rather than relying on page builders, delivering precise and maintainable solutions.
- Create brochures and marketing materials as the company's in-house designer across digital and print formats.
- Work directly with clients to understand briefs, gather requirements, and translate business goals into functional design and development solutions.
- Use AI tools including ChatGPT and Claude daily to write, debug, and improve code, troubleshoot issues, and automate repetitive tasks.

- Conduct functional and cross-browser testing before every handover, maintaining quality standards across all deliverables.

Founder & Lead Developer | [Lumora Technologies](#) | 2024 – Present

- Founded and operate a software and web development company serving 20+ SME clients independently architecting, building, securing, and maintaining live production systems across multiple industries.
- Design multi-tier solution architectures: front-end (HTML5/CSS3/JS), back-end (PHP/Python), database (MySQL), and CMS layer (WordPress/WooCommerce) ensuring each layer is functional, reliable, secure, and maintainable.
- Build and maintain REST API integrations connecting client platforms to payment gateways, stock systems, email services, and third-party tools handling authentication, error handling, and edge cases in production.
- Implement security across all platforms: role-based access control, authentication, input validation, data integrity enforcement, SSL/HTTPS, and audit logging.
- Apply AI tools and automation to streamline development workflows, replace manual processes, and deliver faster without sacrificing quality.
- Administer MySQL databases across all client environments: schema design, query optimisation, data validation, integrity maintenance, and reconciliation.
- Respond to production outages and failures diagnosing issues at application, database, or infrastructure layer and resolving them systematically.
- Produce and maintain technical documentation, SOPs, deployment guides, and user manuals for every project.
- Instituted structured QA and deployment processes that reduced errors by 40% and measurably improved system stability.

KEY PROJECTS

Obesity Risk AI Prediction Model — Python • Pandas • Scikit-learn • ML • Jupyter Notebook

- Independently designed and delivered a complete AI/ML pipeline from scratch: data collection, cleaning, feature engineering, model selection, training, cross-validation, and output reporting — processing 1,200+ health records to 97% classification accuracy. Self-studied machine learning to build it.

Voter Registration & Digital Security Platform — JavaScript • PHP • SQL • Security • Full SDLC

- Full-stack secure platform built end-to-end: multi-tier architecture, database schema, business logic, role-based access control, audit logging, data integrity enforcement, and complete technical documentation — managed entire SDLC independently.

API Integration Suite — Lumora Technologies — JavaScript • PHP • REST APIs • JSON • Automation

- Built and maintain integrations between 20+ client platforms and external services — payment gateways, stock systems, shipping providers, email automation — using REST APIs, JSON, OAuth, and custom scripting in live production environments.

SQL Database Design & Administration — MySQL • SQL • Schema Design • Reporting

- Designed normalised relational schemas, wrote complex multi-table queries, enforced integrity constraints, administered user access, and produced structured analytical reports and Excel dashboards from raw operational data.

Multi-Client Production Platform Portfolio — WordPress • WooCommerce • PHP • MySQL • Full-Stack

- 20+ live production systems designed, built, and maintained end-to-end — e-commerce platforms, business portals, client sites — with ongoing feature development, bug resolution, security maintenance, and user support.

EDUCATION & CERTIFICATIONS

Advanced Diploma in Information Technology — In Progress

Vaal University of Technology | 2026 – 2027 | Expected graduation: 2027

- Semester 1 completed: Emerging Technologies (82% — Distinction), IT Management (76% — Distinction), Advanced Software Design (77% — Distinction), Statistics for IT (71%)

- Semester 2 in progress: Artificial Intelligence, Advanced Databases, User Experience Design (UXD), Research Methodology for IS

Diploma in Information Technology: Software Development (NQF 6) — Completed

Vaal University of Technology | Completed 31 Dec 2025 | Conferred 13 Apr 2026 | **76% Weighted Average • 13 Academic Distinctions**

- Key modules: Programming Logic, Development Software, Information Systems, System Software, Business Analysis, Web Development, Entrepreneurship, IT Legal Skills

Certifications

- IBM SkillsBuild: User Experience Design Fundamentals — Issued 24 Sep 2026 | Verify: <https://www.credly.com/badges/0f3d60e8-6340-4f1b-90ee-9ef9fccc4e3a>
- Cisco CCNAv7: Switching, Routing and Wireless Essentials — Cisco Networking Academy
- Cisco IT Essentials: PC Hardware and Software — Cisco Networking Academy
- AWS Training / AWS Functions Workshop — 2025
